Data Flow Outline*
 Local providers as detailed in the SID Data Rich Picture in section (k) above pseudonymise their data and pass it into the Sussex Integrated Dataset
 The risk stratification supplier, SCWCSU, apply the tool on the pseudonymised integrated dataset in the SID and generate results
 The generated results are reidentified by SCWCSU acting in their capacity as DSCRO
 These identifiable results (NHS No, risk score and markers) are made available to the GP and approved INT Practitioners for direct care

*No national dataflows are used in this process.
